

How to Make Pour-Over Coffee:

First, heat water to 200°F (93°C). While waiting, place filter in dripper and rinse with hot water.

Add 2 tablespoons of freshly ground coffee to the filter.

When water is ready, pour a small amount over the grounds and wait 30 seconds for blooming.

Slowly pour remaining water in circular motion until you've used 12 oz total.

Remove filter and serve coffee immediately.
